Copel records best supply quality indexes in its history

In 2011, Copel recorded the lowest indexes of non-scheduled interruptions throughout its history. DEC, an index that measures the average hours in the year of customer interruptions was 10.35 – 10% lower than the previous year's index. FEC, which measures the average frequency of interruptions in the year ended at 8.12, down 14% compared to 2010.

With these results, Copel exceeds ANEEL's targets, whose limits of DEC and FEC for 2011 were set at 13.53 and 11.94, respectively.

Curitiba, January 30, 2012.

Sincerely,
Ricardo Portugal Alves
