Colíder HPP – Schedule Change

Companhia Paranaense de Energia – COPEL, a company that generates, transmits, distributes and sells power, with shares listed on the BM&FBOVESPA (CPLE3, CPLE5, CPLE6), the NYSE (ELPVY, ELP) and the LATIBEX (XCOP), hereby informs its shareholders and the market in general that the expected date for the beginning of commercial operations of the Colíder Hydroelectric Power Plant has been revised: the first generation unit is expected for December 2017, while the third and last generation unit is expected to begin operations in April 2018 (the forecast disclosed in our last Quarterly Information - ITR was that operations would begin in the second half of 2017).

The change in the start-up schedule is the result of difficulties related to environmental licensing and supplier delays in equipment delivery and services related to electromechanical assembly and construction of the transmission line associated with the plant.

With investments of R\$2.2 billion, the project located on the Teles Pires River, in Northern of the State of Mato Grosso, will have an installed capacity of 300 MW and a assured power of 179.6 average MW, 125 average MW of which was sold in the regulated environment at the final rate of R\$103.40/MWh, on the reference date of July 1, 2010, restated by the IPCA index to R\$158.25 until November 2016.

Curitiba, January 11, 2017.

Gilberto Mendes Fernandes

Chief Corporate Management Officer interim as Chief Financial and Investor Relations Officer
